# PORTE PIVOT

Passage doors  
Portes de passage  
Passage doors  
Durchgangstüren

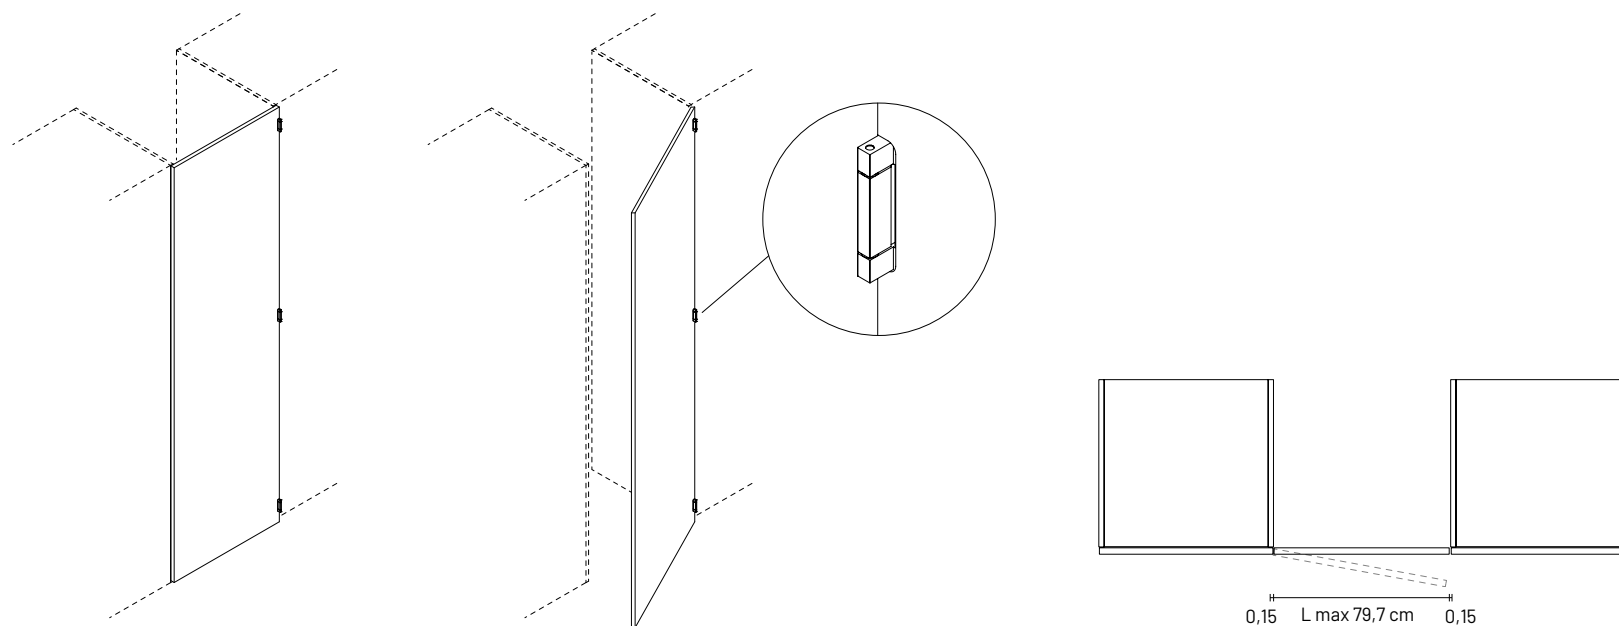

**DESCRIZIONE** Porta con apertura in una sola direzione tramite cerniere con sistema Pivot agganciate su fianco. Apertura push-pull, tramite maniglia o gola verticale.  
**CALCOLO DIMENSIONALE** Per calcolare la larghezza dell'anta è necessario sottrarre 3 mm alla larghezza totale del vano. La larghezza massima dell'anta è di 79,7 cm.

**DESCRIPTION** One-way opening door via Pivot system hinges hooked on side. Push-pull opening, via handle or vertical groove.  
**DIMENSIONAL CALCULATION** To calculate the width of the door, it is necessary to subtract 3 mm from the total width of the compartment. The maximum door width is 79,7 cm.

**DESCRIPTION** Ouverture de la porte dans un sens avec système à charnières pivotantes. Ouverture push-pull par poignée ou gorge.  
**CALCUL DES DIMENSIONS** Pour calculer la largeur de la porte, il faut soustraire 3 mm de la largeur totale du compartiment. La largeur maximale de la porte est de 79,7 cm.

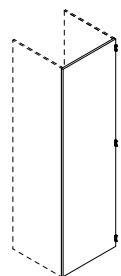

**DESCRIPCIÓN** Apertura de la puerta en un sentido mediante bisagras laterales giratoria. Apertura push-pull mediante tirador o ranura vertical.  
**CÁLCULO DIMENSIONAL** Para calcular la anchura de la puerta, hay que restar 3 mm a la anchura total del compartimento. La anchura máxima de la puerta es de 79,7 cm.

**BESCHREIBUNG** Türöffnung in eine Richtung durch seitliche Scharniere des Pivot-Systems. Push-Pull-Öffnung über Griff oder vertikale Nut.  
**DIMENSIONALE BERECHNUNG** Um die Türbreite zu berechnen, müssen 3 mm von der Gesamtbreite des Fachs abgezogen werden. Die maximale Türbreite beträgt 79,7 cm.

## PORTE BILICO

Passage door 2 directions  
Porte pivotante 2 sens  
Passage door 2 directions  
Durchgangtür 2 Richtungen

**DESCRIZIONE** Porta con apertura a spinta in entrambe le direzioni con: fissaggio a terra e soffitto, fissaggio su fianco oppure fissaggio a terra e su pensile sopra colonna. L'anta ha come punti di fermo -90°, 0° e 90°. È inoltre possibile regolare la velocità di chiusura in modo indipendente dei primi 80° e degli ultimi 10°.

**DESCRIPTION** Door with push-to-open in both directions with: floor and ceiling fixing, sidewall fixing or floor and overcabinet fixing. The door has -90°, 0° and 90° as stop points. It is also possible to adjust the closing speed independently of the first 80° and the last 10°.

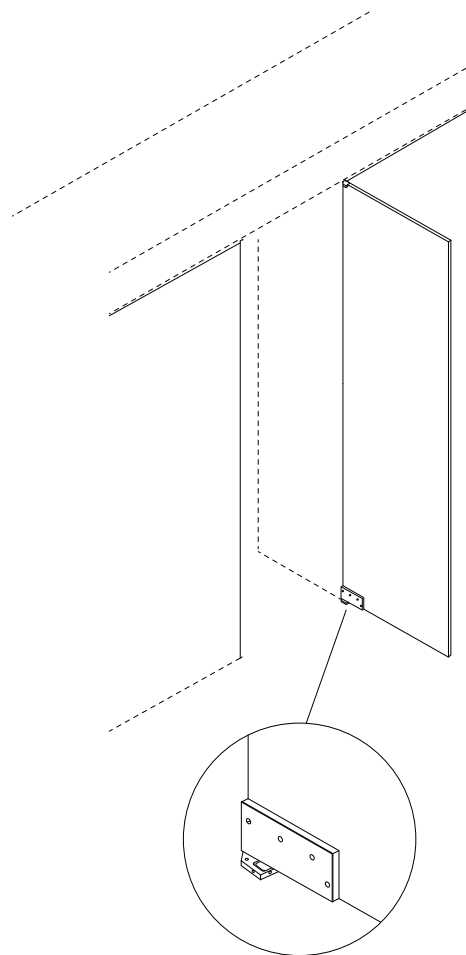

**DESCRIPTION** Porte à ouverture par poussée dans les deux sens avec : fixation au sol et au plafond, fixation latérale ou fixation au sol et au sur meuble. Les points d'arrêt de la porte sont -90°, 0° et 90°. Il est également possible de régler la vitesse de fermeture indépendamment des premiers 80° et des derniers 10°.

**DESCRIPCIÓN** Puerta de apertura por empuje en ambas direcciones con: fijación al suelo y al techo, fijación lateral o fijación al suelo y a meuble arriba. La puerta tiene -90°, 0° y 90° como puntos de parada. También es posible ajustar la velocidad de cierre independientemente de los primeros 80° y los últimos 10°.

**BESCHREIBUNG** Push-to-open-Tür in beide Richtungen mit: Boden- und Deckenbefestigung, Seitenbefestigung oder Boden- und Übermoebeln. Die Tür hat -90°, 0° und 90° als Anschlagpunkte. Es ist auch möglich, die Schließgeschwindigkeit unabhängig von den ersten 80° und den letzten 10° einzustellen.

## PORTE BILICO

Passage door 2 directions  
Porte pivotante 2 sens  
Passage door 2 directions  
Durchgangtür 2 Richtungen

**APPLICAZIONE** La colonna su cui viene fissata l'anta bilico deve sempre avere anta a terra.

La colonna adiacente deve avere anta e fianco a terra con piedini regolabili oppure, nel caso in cui abbia lo zoccolo a vista, necessita dell'aggiunta di una spalla a terra.

**APPLICATION** The column to which the bi-fold door is attached must always have grounded door.

The nearby column must have door and side to the ground with adjustable feet or, in case it has the exposed plinth, requires the addition of a side on the ground.

**APPLICATION** La colonne sur laquelle est fixée la porte battante doit toujours être équipée d'un porte à terre.

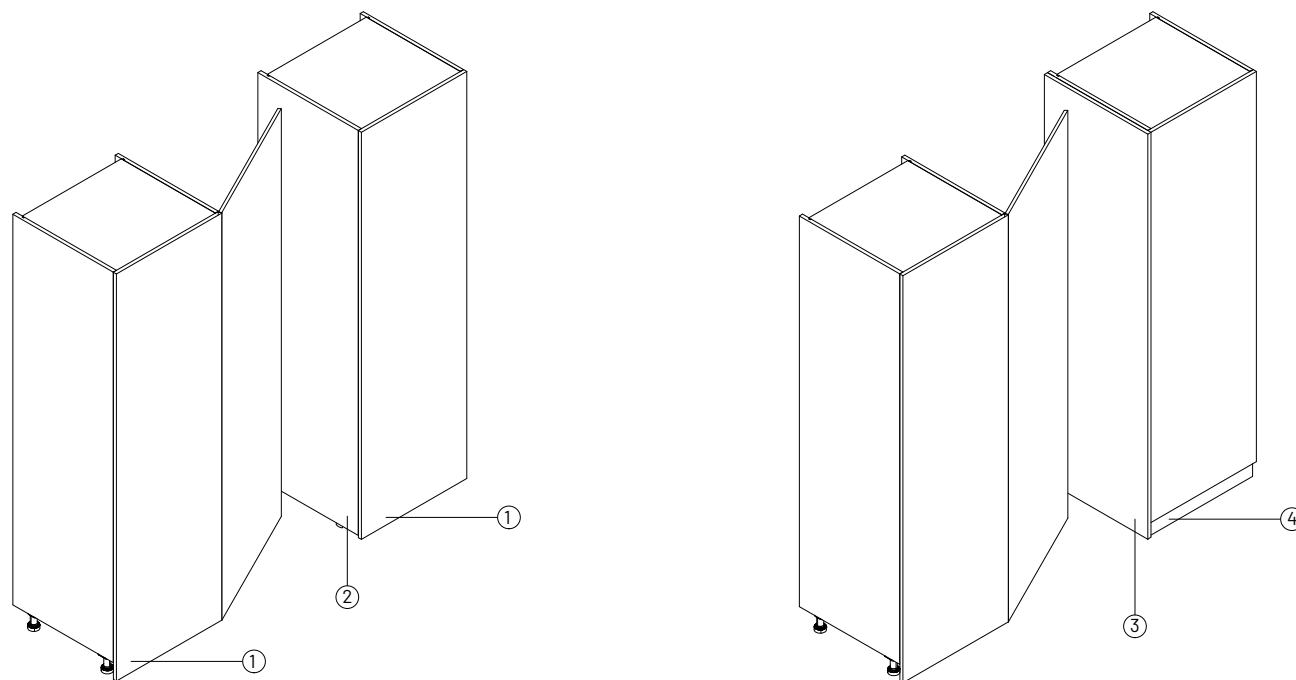

La colonne à côté doit avoir porte et côté au sol avec pieds réglables ou, dans le cas où il a le socle visible, nécessite l'ajout d'une côté au sol.

**APLICACIÖN** La columna a la que se fija la puerta batiente debe tener siempre una puerta con toma de tierra.

La columna al lado debe tener puerta y costado al suelo con pies ajustables o, en caso de que tenga el zócalo a la vista, necesita la adición de un costado en el suelo.

**ANWENDUNG** Die Säule, an der die Flügeltür befestigt ist, muss immer einen geerdeten Tür haben.

Die danebende Säule muss entweder eine Tür und eine Seite am Boden mit verstellbaren Füßen haben oder, falls sie einen sichtbaren Sockel hat, eine Seite zum Boden hinzufügen.

1. **anta a terra** | door on the ground | porte sur le sol | puerta en el suelo | tür auf dem Boden
2. **fianco a terra** | structural side panel on the ground | flanc au sol | costado en el suelo | am Boden liegende Seite
3. **spalla a terra** | side panel to the ground | côté au sol | laterales al suelo | aussenseiten auf den Boden
4. **zoccolo a vista** | exposed plinth | socle visible | zócalo visible | sichtbarer Sockel

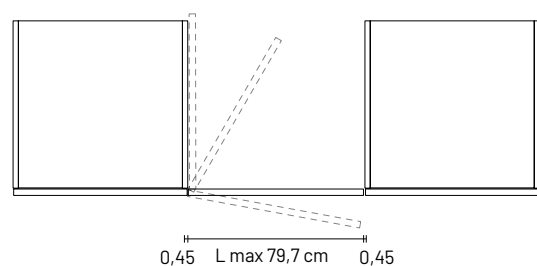

**CALCOLO DIMENSIONALE** Per calcolare la larghezza dell'anta è necessario sottrarre 9 mm alla larghezza totale del vano. La larghezza massima dell'anta è di 79,7 cm. L'altezza dell'anta sarà determinata dall'altezza delle colonne adiacenti, con un'altezza massima di 275 cm. Nel caso di fissaggio terra-soffitto l'altezza dell'anta si ottiene sottraendo 16 mm all'altezza totale del vano di passaggio.

**DIMENSIONAL CALCULATION** The width of the door will be 9 mm less than the passage compartment. The height of the door will be 16 mm less than the height of the passage compartment. Maximum door width 80 mm, maximum door height 275 mm.

**CALCUL DES DIMENSIONS** La largeur de la porte sera de 9 mm de moins que l'espace de passage. La hauteur de la porte sera de 16 mm de moins que la hauteur de l'espace de passage. Largeur maximale de porte 80 mm, hauteur maximale de porte 275 mm.

**CÁLCULO DIMENSIONAL** La anchura de la puerta será 9 mm menos que el hueco de paso. La altura de la puerta será 16 mm menos que la altura del hueco de paso. Anchura máxima de la puerta 80 mm, altura máxima de la puerta 275 mm.

**DIMENSIONALE BERECHNUNG** Die Breite des Tür beträgt 9 mm weniger als der Durchgangsraum, die Höhe des Tür ist 16 mm weniger als die Höhe des Durchgangsraums. max. Türbreite 80 cm, max. Türhöhe 275 cm.

Le lastre di ceramica Marazzi rappresentano una perfetta sintesi tra l'estetica naturale della pietra e l'eccezionale resistenza del gres porcellanato. Questi prodotti si distinguono per la loro capacità di replicare fedelmente le caratteristiche delle materie d'origine. Sono lavorate tramite un processo produttivo che conferisce ai prodotti un'elevata resistenza allo scivolamento, mantenendo una superficie morbida al tatto e facile da pulire grazie all'assenza di ruvidità superficiale. Le lastre sono progettate per eliminare fino al 99,9% di batteri e altri microrganismi nocivi, contrastando efficacemente la loro proliferazione e prevenendo la formazione di macchie e odori sgradevoli. Inoltre, presentano una resistenza all'abrasione profonda, bassa porosità e resistenza al gelo.

Marazzi ceramic slabs represent a perfect synthesis between the natural aesthetics of stone and the exceptional strength of porcelain stoneware. These products are distinguished by their ability to faithfully replicate the characteristics of the original materials. They are processed through a production process that gives the products high slip resistance while maintaining a surface that is soft to the touch and easy to clean due to the absence of surface roughness. The sheets are designed to eliminate up to 99.9% of harmful bacteria and other microorganisms, effectively combating their proliferation and preventing the formation of stains and unpleasant odors. They also exhibit deep abrasion resistance, low porosity and frost resistance.

Les dalles céramiques Marazzi représentent une synthèse parfaite entre l'esthétique naturelle de la pierre et la résistance exceptionnelle du grès cérame. Ces produits se distinguent par leur capacité à reproduire fidèlement les caractéristiques des matériaux d'origine. Ils sont traités selon un processus de production qui leur confère une grande résistance au glissement, tout en conservant une surface douce au toucher et facile à nettoyer grâce à l'absence d'aspérités superficielles. Les feuilles sont conçues pour éliminer jusqu'à 99,9 % des bactéries et autres micro-organismes nocifs, ce qui permet de lutter efficacement contre leur prolifération et d'empêcher la formation de taches et d'odeurs désagréables. Elles présentent également une grande résistance à l'abrasion, une faible porosité et une résistance au gel.

Las losas de cerámica Marazzi representan una síntesis perfecta entre la estética natural de la piedra y la excepcional resistencia del gres porcelánico. Estos productos se distinguen por su capacidad de reproducir fielmente las características de los materiales originales. Se elaboran mediante un proceso de producción que confiere a los productos una alta resistencia al deslizamiento, manteniendo al mismo tiempo una superficie suave al tacto y fácil de limpiar gracias a la ausencia de rugosidades superficiales. Las láminas están diseñadas para eliminar hasta el 99,9% de las bacterias y otros microorganismos nocivos, combatiendo eficazmente su proliferación y evitando la formación de manchas y malos olores. También presentan una gran resistencia a la abrasión, baja porosidad y resistencia a las heladas.

Die Keramikplatten von Marazzi stellen eine perfekte Synthese zwischen der natürlichen Ästhetik von Stein und der außergewöhnlichen Festigkeit von Feinsteinzeug dar. Diese Produkte zeichnen sich durch ihre Fähigkeit aus, die Eigenschaften der ursprünglichen Materialien getreu wiederzugeben. Sie werden in einem Produktionsprozess verarbeitet, der den Produkten eine hohe Rutschfestigkeit verleiht, während die Oberfläche sich weich anfühlt und dank des Fehlens von Oberflächenrauigkeiten leicht zu reinigen ist. Die Platten sind so konzipiert, dass sie bis zu 99,9 % der Bakterien und anderer schädlicher Mikroorganismen abtöten, ihre Vermehrung wirksam bekämpfen und die Entstehung von Flecken und unangenehmen Gerüchen verhindern. Sie sind außerdem sehr abriebfest, haben eine geringe Porosität und sind frostbeständig.

Le lastre di gres porcellanato sono costituite da un materiale ceramico estremamente compatto ottenuto attraverso un impasto di diverse materie prime naturali (argille, sabbia, ecc.) successivamente cotte a temperature elevatissime per renderlo impermeabile e non poroso. È un materiale sicuro e igienico, ideale quindi per il contatto con gli alimenti grazie alla sua superficie compatta e non porosa.

Porcelain stoneware slabs consist of an extremely compact ceramic material obtained through a mixture of different natural raw materials (clays, sand, etc.) subsequently fired at very high temperatures to make it waterproof and non-porous. It is a safe and hygienic material, making it ideal for contact with food due to its compact and non-porous surface.

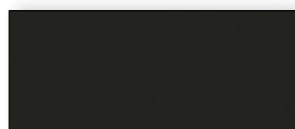

Les plaques de grès cérame sont constituées d'un matériau céramique extrêmement compact obtenu par le mélange de différentes matières premières naturelles (argiles, sables, etc.) et cuit ensuite à très haute température pour le rendre imperméable et non poreux. Il s'agit d'un matériau sûr et hygiénique, idéal pour le contact avec les aliments en raison de sa surface compacte et non poreuse.

Las losas de gres porcelánico consisten en un material cerámico extremadamente compacto obtenido mediante una mezcla de diferentes materias primas naturales (arcillas, arena, etc.) cocido posteriormente a temperaturas muy elevadas para hacerlo impermeable y no poroso. Es un material seguro e higiénico y, por tanto, ideal para el contacto con alimentos debido a su superficie compacta y no porosa.

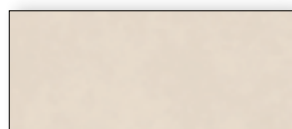

Feinsteinzeugplatten bestehen aus einem äußerst kompakten keramischen Material, das aus einer Mischung verschiedener natürlicher Rohstoffe (Ton, Sand usw.) gewonnen und anschließend bei sehr hohen Temperaturen gebrannt wird, um es wasserdicht und porenfrei zu machen. Es handelt sich um ein sicheres und hygienisches Material, das aufgrund seiner kompakten und porenfreien Oberfläche ideal für den Kontakt mit Lebensmitteln ist.
